4) Interview Summary (PTO-413)

Paper No(s)/Mail Date. _

6) Other: ___

Notice of Informal Patent Application

Application/Control Number: 10/796,059 Page 2

Art Unit: 2616

Response to Arguments

Applicant's arguments filed August 1, 2007 have been fully considered but they are not persuasive.

- 1. Applicant argued that that the interface cards of the node do not represent virtual point sets. However, the monitored link traffic ends at the node which thereby represents a virtual end point (para. 42, lines 1-2) as similarly described in the specification on page 9, lines 16-25.
- 2. Applicant argued that the node does not detect an amount of abnormal traffic. However, the node determines a BER of traffic where the BER represents the amount abnormal traffic found in the total amount of traffic received (para. 42, last two lines; para. 103).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Mayweather et al. (US 2003/0031126).

3. Regarding claims 1-4 and 12, Mayweather discloses a failure detecting apparatus for detecting network failures (fig. 1; fig. 8, steps 1-2), based on information obtained from monitor target equipment which is disposed within a communication network (fig. 1) and which has several communication interfaces (fig. 6, items 30 and 32). The apparatus comprises a storage device for storing traffic flow information (para. 59, lines 1-10; para. 61; para. 65; fig. 7, item

Application/Control Number: 10/796,059

Art Unit: 2616

49) indicating the amount of receiving traffic and transmitting traffic (note: traffic on each link is determined (para. 59, lines 1-10), a computation device for computing an amount of abnormal traffic (para. 13, lines 1-3) using a virtual point set in the monitor target equipment as an end point among several segments of traffic inside the monitor target equipment (fig. 6; note: interfaces 30 and 32; para. 42, lines 1-2) using the traffic flow information and outputting an obtained flow as the amount of abnormal traffic (para. 13, lines 1-5; para. 42, last two lines; note: BER calculation involves traffic rate - para. 103 - one bit error for every 10^9 bits transmitted), and determination device determining whether there is a failure using the amount of abnormal traffic, thereby outputting a determined result (para. 13, lines 1-5). Further regarding claim 2, the apparatus performs its functionality using computer instructions (para. 179).

Allowable Subject Matter

4. Claims 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2616

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Harper whose telephone number is 571-272-3166. The examiner can normally be reached weekdays from 11:00 AM to 7:00 PM ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn Feild, can be reached at 571-272-2092. The centralized fax number for the Patent Office is 571-273-8300. For non-official communications, the examiner's personal fax number is 571-273-3166 and the examiner's e-mail address is kevin.harper@uspto.gov.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications associated with a customer number is available through Private PAIR only. For more information about the PAIR system, see portal uspto gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
